

Tier Access, Promotion & User Experience

GSPS Implementation Specification Pack • Prepared for Claude Code • August 28, 2026 • Draft implementation directives; requires securities/compliance counsel review before live personalized recommendations or execution.

Entitlement principles

Higher tiers may expand analysis depth, scan frequency, markets, and validated strategy modules. They must not remove suitability checks, risk budgets, correlation limits, event filters, cooldowns, or critical risk locks.

- Upgrade eligibility must never be marketed as the solution to a loss sequence.
- Upgrades may take effect at a defined future session after required onboarding—not retroactively to defeat an entry cap.
- The app must explicitly distinguish “feature access” from “permission to risk more capital.”
- Novice risk, product complexity, and frequency must remain constrained even when a user is profitable.

Promotion readiness model

Requirement	Pro eligibility baseline
Experience	At least 25 completed Novice GSPS swing trades
Time	At least 60 calendar days of documented GSPS use
Process score	Rolling 30-day Execution Score of 80+
Stop adherence	90%+
Position-size compliance	95%+
Risk state	No severe cooldown/lock in prior 30 days
Education	Complete intraday risk, settlement, gaps, slippage, and account-type module
Practice	Complete a defined paper-trading/intraday simulation validation period

These are initial product-policy proposals. Keep thresholds as remotely configurable policy values with change logs; do not hard-code them into UI components.

Novice user experience

- Show 0–3 new entries available today; phrase it as “maximum,” never a target.
- Default homepage: market regime, one best qualified plan or “No qualified setup,” education card, existing-position protection status, and cooldown status.
- Hide advanced indicators by default; allow “Why this qualifies” expansion that teaches the exact triggered rules.
- Use plain-language warnings before earnings, leverage, correlation overlap, stale data, high spread, or plan mismatch.
- If a plan cannot be sized appropriately due to account size or whole-share constraints, show “Not operationally viable for this account configuration,” not a forced trade.

Intraday boundary for Pro+

Pro may introduce intraday strategies only as separately defined modules with session, spread, liquidity, timeframe, daily-loss, and trade-count rules. Do not simply shorten the Novice swing timeframe.

Control	Pro intraday initial policy
Setups displayed	3–5/day
New intraday entries	2/day default; configurable by validated policy
Concurrent positions	1–2
Consecutive loss pause	2 stopped-out trades
Daily loss lock	Configured by verified account equity/risk profile
Entry confirmation	Closed 5-/15-/30-minute bar; no unconfirmed intrabar signal

Required wording

- Use: “Rules Alignment,” “trade plan,” “scenario,” “planned risk,” “invalidates,” and “historical context.”
- Avoid: “guaranteed,” “highly likely profit,” “AI knows,” “best trade,” “safe,” “automatic winner,” and “beat the market.”
- Use neutral prompt after discipline success: “You may be eligible to review additional educational tools.”
- Never prompt an upgrade in response to a loss, cooldown, or risk lock.
